

Thank you for participating in ACM Open!

A New Model for Open Access Publication

To assist ACM with your account setup, please provide us with the following information:

Institutional Email Domain(s)

Email domain(s) are needed so that we may affiliate corresponding authors with your institution's ACM Open account. Authors must use an email address that includes their institution's domain(s) in order to prevent the system from requesting payment for APC fees when they publish with ACM.

Please check here if you prefer to provide only your institution's main email domain and assign a wildcard to cover any associated subdomains: ☐

Otherwise, please provide below all email domains/subdomains associated with your institution that you would like to have covered under your institution's ACM Open agreement:

Open Access (OA) Dashboard

Your participation in ACM Open offers you the ability to access the ACM Open Access Dashboard and to view and download published articles by authors affiliated with your institution. Please provide us with the email address(es) for the individual(s) who should have access to the ACM Open Access Dashboard. Instructions on how to set up admin access and how to obtain reports will then be sent to the contact addresses you have provided. Multiple admins are allowed, as are shared mailbox addresses. Per the next section below, admins will need to have ACM Digital Library Web Accounts in place to be eligible for administrative rights to the ACM Open Access Dashboard.

ACM Digital Library Web Accounts

Admins must have an ACM Digital Library Web Account in place before access to the ACM Open Access Dashboard may be granted. Admins who do not yet have an ACM Digital Library Web Account may create one by clicking on the "Register" link in the upper right-hand corner of the ACM Digital Library homepage (dl.acm.org).

A verification email to confirm registration is then sent; once admins have verified their registration and confirmed to ACM, their ACM Digital Library Web Account setup is complete and ACM is able to provide their OA Dashboard access.

ACM Open Institution Repository Deposit

One of the benefits of participating in ACM Open is the deposit of the Version of Record (VoR) of the corresponding author's article into your institution's article repository. ACM will also deposit a copy of the manuscript version of any APC-eligible article from secondary authors affiliated with your institution. If you'd like ACM to deposit published articles to your institution's repository, please provide us with the following information. ACM recommends the FTP and SFTP deposit methods for their quick and easy setup but can also accommodate the other options shown below.

If institution repository deposit is not needed, please check this box and bypass the questions below. ☐

ACM also offers the option to have papers posted to ACM's SFTP site to be retrieved at the library's convenience. If this method is preferred over deposit into your institution's IR, please check this box and bypass the questions below: ☐

Preferred Deposit Method*:

- ☐ FTP
- ☐ SFTP
- ☐ S.W.O.R.D. v1
- ☐ S.W.O.R.D. v1 + DSpace
- ☐ S.W.O.R.D. v2
- ☐ S.W.O.R.D. v2 + DSpace

How often should the system check for new deposits?*

- ☐ Daily
- ☐ Weekly
- ☐ Monthly
- ☐ Quarterly
